Description (no more than 120 words)

Technology is advancing at a remarkable pace. While the public enjoys the convenience of innovative technologies like artificial intelligence (AI), it is essential to remain vigilant against potential cybersecurity risks. To enhance public awareness about cybersecurity, the Digital Policy Office (DPO), the Cyber Security and Technology Crime Bureau (CSTCB) of the Hong Kong Police Force (HKPF) and the Hong Kong Computer Emergency Response Team Coordination Centre (HKCERT) are jointly organising the “Innovate with Grace, Peace in Cyberspace” Seminar and AI-Generated Four-Panel Comic Contest Award Ceremony.

This seminar features expert talks on the safe use of AI, the latest cyber threats and relevant defence measures to deepen participants' cybersecurity awareness. Additionally, the award ceremony will recognise winners of the AI-Generated Four-Panel Comic Contest for their creativity and innovative use of AI tools to spread cybersecurity messages.
